User (decisions)
Orchestrator (this session)
Validation gates
Sub-agents (fresh context each)
Handover + request
Grilling interview: 14 decisions agreed
Plan data sources
spawn
Probe agent: ExoMol / ExoMolHR access
report (facts only)
Own stick spectra from .states / .trans (no ExoCross)
Self-check vs ExoMolHR CO: 256 648 lines, intensities within 4×10^{-5}
20 opaque sandboxes (spec_XX: lines.csv only)
Answer keys withheld; scorer self-check = 100%
Spawn pilot (blind CO)
Spectroscopist (pilot)
Checkpoint: approve fan-out
100%, audit pass
Audit every tool call; score vs withheld key
Fan out in parallel
13 spectroscopists (blind, named, noise)
Audit + score each run; manual review of flags (1 run)
All 100%: approve harder round
benchmark too easy?
Agent claims re-checked in raw data (CS duplicates)
Build 6 hard spectra (no anchor, σ = 10^{-2})
6 spectroscopists (hard round)
dashed boxes = sandbox: no network, no files outside spec_XX, no sub-agents
Audit + score (same protocol)
Reports + vault state (only checked numbers)
